

				Legend	Strongly Agree	Agree	Slightly Agree	Slightly Disagree	Disagree	Strongly Disagree
Instructor	Response Rate	Mean	Median	Response Distribution						
Organization - The instructor used class time well	38 / 57	5.3	5.5	50% 37% 11% 3%						
Clarity - The instructor communicated course material clearly	37 / 57	5.2	5	46% 41% 5% 8%						
Learning Focused - The instructor's teaching methods helped students learn	36 / 57	4.8	5	36% 33% 19% 6% 6%						
Course	Response Rate	Mean	Median	Response Distribution						
Learning Materials - The assignments, readings, and activities facilitated student learning	37 / 57	4.9	5	43% 32% 14% 5% 5%						
Assessment - Assessments (such as quizzes, papers, and exams) aligned with course objectives	37 / 57	5.2	5	43% 38% 14% 5%						
Support - Help was available for students	36 / 57	5.2	5	42% 39% 19%						

Having the practice exams were extremely helpful and insured that students were prepared for the exams.
practice exams, podcast info videos.
Not much.
I really liked having the practice exam generator, it helped a lot with preparing me for the exams.
Practice tests
None
The practice tests
The explanation of things
The practice exam generator helped a lot for the exams
Lecture activities
Interacting with students and asking questions then explaining the answers
Going over lecture slides and using the practice tests
Id say the practice exam generator was very helpful to show us what to expect on each of our exams.
The lectures were most useful, outside of that the papercasts were also pretty helpful for my learning.
I liked the instructors' questions during class and it honestly made me pay attention to the course material.
The study tool for exams was very helpful.
The practice exam generators
The focus on knowledge with reasonable exams was helpful for learning. I felt that studying for the exams helped me know the material much better. Class was generally informative and made sense, with good lecture material.
I liked the generative exams. They were helpful in the sense of potential memorization.
test bank
Extra credit activities were fun.
I think the lectures were very entertaining however I wish they tied into the practice questions a little bit more

The lecture. I felt as though that going to the lecture everyday was really the most helpful.
I liked that the slides were explained thoroughly. No topic was missed.
I would say the most useful aspects would be the practice exams that could be generated with all the questions. Reviewing them again and again helped gain more of an understanding of the concepts as you can depict which answer choices were correct and which weren't
The slides during class
The aspect that was most useful in my learning was the videos to explain each concept shown in lecture.
Practice exams were great for studying
class
Having a test bank to go off of
The practice exams were very helpful.
Great Professor
The many examples you give during lectures
everything this guy was a legend
When this class is taught again, what changes can the instructor make that will help improve support for student learning?
It would be helpful to have some sort of summary after each chapter. The chapters were often spread over the course of a few days, making it easy to forget. Having a quick recap of the main points would be helpful.
None
Explain the material better and add more in-class activities/work.
I believe that the instructor should post the lecture slides in ICON after class for students to go back and fill in anything that they may have missed during the class period for notes.
Attendance, if students know the concepts already, they shouldn't be punished.
Get rid of the 3 exams only for your grade. Change the class to actually trying to get the students to learn rather than just memorizing questions from the practice exam.
Maybe include some homework assignments just so the material sticks better after class time
Make it a bit more engaging
Don't stand in front of the screen. Make the class more interesting, instead of just reading off the slides.
na
I dont like the way the exams are set up. With the multiple choice stuff. Its tricky
It would be nice to have some assignments so that the only grades are not just tests.
I do have an issue with the class basically being just memorizing questions on the practice exam generator while having it is very nice I feel like it takes the value of the actual classes away.
Maybe a bit more group work or in class work that could help with further developing our understanding of topics.
I believe he did an awesome job!
Slides be posted online after class
Certain instances, like playing scattergories, was one of the least useful things Ive done in a class. The rules do scattergories were not even used correctly, and it resulted in other students having an unfair advantage which improved their grades over others. Check the rules, and have a standard system for answers.
Post the slide deck you showed in class to canvas, change the tests to regular multiple choice, give homework assignments/ quizzes to help with overall grade.
don't have answers on the exam be none of the above, to me they are pointless
Make participation more impactful on grades.
Assign the readings to a certain date rather than explain how they are just up to the students discretion
I think that the paper casts should be talked about more in class rather than just the slides. The exams seems to have a lot of questions regarding the paper casts and readings.
Maybe not so many of the extra assignments, and don't make the exams have as much content on paper casts, articles, etc.
Maybe make the lectures a bit different so it isn't just reading off a slide all the time.
Nothing
I think the instructor can provide more out of class practice for the concepts and go over the podcasts in class
Maybe post the slides after the unit, so we can use those if we missed taking them in class
nothing

Better class structure. Not just lecture. And not cold calling students with the roulette wheel
N/A
n/a
more group work maybe
nothing stay the same beast
What else would you like the instructor to know about your experience in this course?
I think that the instructor did a great job teaching this section. I feel I have a basic understanding of the content now.
Good course
N/A
Overall, it was a pretty straightforward class and I enjoyed it.
Did not learn much.
It was a good experience and I am happy with my grade
Nothing, I enjoyed the course
na
NA
It was a great course.
This class has taught me a lot about the insurance industry and has given me a new perspective on this industry and Ziyang was a very good teacher at helping us learn with real world examples while making the class engaging.
I did not like the way the exams were structured. I think you need to tell us if the questions have one answer only, or if it is a multiple choice question. It doesnt really help to not clarify, and every other class I have taken, the exams are structured this way.
I had a great experience learning more about RMI.
N/A
Many of the exam questions are written poorly. I learn the material well and still struggle with what some questions ask, and some are straight up wrong. Using common sense and real world knowledge in combination with what Ive learned in class should not result in the wrong answer. I have had to memorize many answers that were simply wrong. Please review the questions thoughtfully. Also, the organization of the readings is poor. You should recommend when students read things, or assign them so they know to read. Only a problem for the first exam, really, but when told there would be readings I assumed I would be informed of when to do them.
I appreciated your love for teaching and Risk Management.
nothing
It was good, I wish he went through the math in the first exam more thoroughly.
This course has been great, I plan to use my knowledge of RMI when I go out into the job market and leverage that as skill
I think the exam generator should be overhauled. What I really didn't like is that the multiple choice format included "exactly one correct answer" and all other questions could have one or more answers. I just felt like it was a sneaky way of weeding people out and I felt as though I studied really hard for the exams and lost points primarily with those questions. I can understand asking difficult questions in a class that is only based on three exams and attendance but that can be done in other ways and I don't think that it should be multiple answer for more than 50% of the exam.
N/A
Nothing
I thought this course was very informative for my first RMI class. I enjoyed the connectivity in class and thought you did a great job
I really enjoyed this course and I am excited for more RMI classes.
